udaFORMAXX Coding and Labelling Options

	Continuous Inkjet	Thermal Inkjet	Thermal Transfer	Label Applicator	Print & Apply Labeller
	Print simple 1-5 line date and batch codes in a range of formats. Non-contact, fast drying for high-speed coding. Coloured and process-specific inks available.	High-resolution non-contact printing in black ink. Cartridge-based system. Can be used for printing text, logos, linear barcodes and 2D codes.	Ribbon-based printing that provides a solid print. Relies on contact with the substrate. Ideal for linear barcode printing and for printing larger amounts of information.	Label applicator fits to the udaFORMAXX to apply pre-printed labels. Can be used in conjunction with a printer to print and label in one pass.	Label applicator that prints variable data on labels immediately before applying. Simplifies process and saves pre-printing costs. Removes risk of wrong label.
